

JF 5D Hammer Mill

JF Feed Processors have high resistance and durability as well as excellent productivity. They combine quality, strength, endurance and accuracy in the processing of various crops. Ideal for farmers who need to feed their livestock daily, JF feed processors are recommended for animal feed production for livestock and wildlife.

Its powerful and quick rotor has high resistance hammers and knives that mill grain and maize on the cobs to produce concentrate ration, besides cutting grass, sugarcane and roots for green fodder preparation.

Application: Grinds dry corn, grain and cobs, chops sugarcane, tropical grasses, cassava, fine branches and other green products with superior quality. Includes a stand and base for electric motor.

BENEFITS:

- Double function in one single unit: chops green forage and mills grains;
- higher durability and resistance;
- full usage of ground material resulting in higher production performance;
- easy operation and low maintenance;
- available with base for driving with electric motor, diesel/ gasoline and tractor P.T.O.

Cob	Yes
Green fodder	Yes
Maize grain	Yes
Number of blades	2
Number of moving hammers	6
Required electric motor power	2 to 3 hp

The motors, cyclones, sieves and engines are optional and sold separately. Productivity may vary and depend on factors such as: tractor, motor or engine power, labour availability, type and quality of forage. The grain size/ productivity are directly linked to the grain moisture content.
