

JF C240 Evolution

Interchangeable new system - choose from 70–95 cm row spacing on one machine.

Innovative folding arm system that makes transportation easier and allows harvesting in offset position or in line on the front or back of tractor. This is especially useful for opening fields or edges without wasting forage.

Front fairings included (except for 736 mm version), resulting in less forage waste and higher harvesting speed. New longer chute design with double deflector for better discharge precision on trailers and trucks. Hydraulic control with precise and comfortable control system by joystick.

Featuring 2 rotors with 24 blades with “C” technology for a faster chopping process, more uniform particles and grain cracking without the need of additional devices.

NEW ROTOR WITH 12 “C” SHAPED BLADES

Stable and resistant.
Protects the rotor against wearing.
It breaks the maize grain skin.
Carriage bolt that simplifies maintenance.

New gathering platform with higher intake capacity.

SPECIFICATIONS:

Capacity	Up to 60 ton/h
Cut sizes	24 sizes (2–36 mm)
Number of rotors	2
Number of rows	2
Number of blades in each rotor	12
Distance between rows	700 mm to 950 mm
Number of rotor blades	24
Power source	Tractor P.T.O
Number of gathering drums	8
Recommended PTO power	80–100 kW
Required PTO revolution	540 rpm
Weight	1350 kg
Transmission system	Cardan & gearbox
