

JF Silage Master

JF is revolutionising its storage equipment line. JF Silo Master, a forage bagger for the farmer who wants to reduce labour costs by implementing a simple operational process to improve the quality of silage through its storage.

JF's bagging technology isolates the forage from contact with air, dirt, soil and other external factors, reducing losses in volume and quality of silage due to better storage and faster fermentation (losses up to 2% inside bag versus up to 20% in traditional system).

A better preserved silage provides better nutrients for the livestock, increasing its performance in both milk and beef production.

The JF Silo Master features an adjustable feeding conveyor belt driven by a hydraulic motor, high quality disc braking system for adjusting silage density for better preservation and more uniform bag filling.

Its simple and strong transmission makes it a reliable choice for improving silage quality through better storage.

SPECIFICATIONS:

Petrol engine drive	Honda 3.7 / 5.0 kW
Tank capacity	approx. 1.8L
Motor rev	3600 rpm
Drum speed	300 rpm
Drum diameter	300 mm
Timber diameter	Max. 65 mm
Hammers	30 pcs.
Dimensions (W x H x L)	1150 x 1500 x 1050 mm
Weight	approx. 102 kg
Productivity obtained in test conditions and can vary according to the degree of humidity of the forage, specific weight and working conditions.
