

## JF 3200 AT Row Independant

The JF 3200 AT multi-forage harvester is the ultimate solution from JF for fast harvesting of forage crops and also ideal for forage harvesting contractors. With a 3.2 m wide head of high productivity, it enables the harvesting of various types of forage no matter the distance between rows or direction, greatly increasing output.

It's linkage to reverse-drive tractors allows the machine to work in line with the tractor, offering better maneuverability and compactness when compared to trailed models, with a driving experience similar to a self-propelled unit.

The JF 3200 AT also brings versatility and lower capital costs for the farmer. The tractor, the most expensive part of harvesting combination, is available for other jobs outside the silage season. The capital cost of a tractor and JF 3200 AT combination is therefore much less than even a small self-propelled harvester.

### ADVANTAGES, FEATURES AND BENEFITS

Simple and strong transmission for difficult tasks, built with resistant gearboxes and high quality shafts and modular design for simple maintenance.

### SPECIFICATIONS:

|                                       |                  |
|---------------------------------------|------------------|
| <b>Cut sizes</b>                      | 18 (2,5–34 mm)   |
| <b>Number of rotors</b>               | 2                |
| <b>Number of blades in each rotor</b> | 15               |
| <b>Power source</b>                   | Tractor PTO      |
| <b>Number of gathering drums</b>      | 8                |
| <b>Recommended PTO requirement</b>    | 140–200 kW       |
| <b>Required PTO revolution</b>        | 1000 r.p.m       |
| <b>Weight</b>                         | 3900 kg          |
| <b>Transmission system</b>            | Cardan & gearbox |
| <b>Required PTO revolution</b>        | 540 r.p.m        |
| <b>Weight</b>                         | 1350 kg          |
| <b>Transmission system</b>            | Cardan & gearbox |
