

JF Double Disc Spreaders

The JF Double Disc 1300 and 1600 are spreaders for fertilisers, seeds and lime.

Besides being an economical solution for spreading material with a range from 16 to 36m, the adjustment in the angle of the paddles makes it possible for a more uniform distribution and allows working in small areas due to its independent spreading system (with only one disc), making it easy to spread on edges.

With a capacity of 1300 litres and 1600 litres and quick adjustment of rate by limiting the auger and scale indicator on the cylinder.

The JF Double Disc 1300 and 1600 are light with low power consumption without losing efficiency in the uniform distribution of granular fertiliser, lime and seeds.
