

JF Kanguru 270 Maize Bagger

The JF Kanguru 270 Grain Bagger is a mobile station for storing grain or fertilizer and you can take it wherever you need it. The concept is to care for and store your grain crop in a bag in an anaerobic and stable temperature environment.

It was developed as a solution to logistics and storage problems for grain producers. It can be used by small or large scale farmers, including those who already have a fixed silo and can increase the production volume at any time.

This system makes storage easier and cheaper and makes it possible to sell the grains at the best time in the market.

The farmer might be paid a much better price for the grain when bag storage is used..

BENEFITS:

- Grain selection: allows separate storage of different grain batches.
- Low investment: much cheaper than a fixed storage unit.

SPECIFICATIONS:

Bag	9 feet
Capacity	-
Height without Hopper	3070 mm
Power source	tractor PTO
Tractor power (hp)	25 hp
Transport width	2600 mm
Wheels	6.5 x 16
Working height	3570 mm
Working scheme	200 RPM
Working width	4390 mm
