

FORAGE HARVESTERS

Double Chop Forage Harvester DS 540

The DS 540 is rated amongst the best in the world. This implement harvests grass, lucerne, beet tops, etc., which are suitable for making silage, directly from the field. With the double chop action you get high quality silage. This implement is robust and very sturdily built, with high output and outstanding features, which none of its overseas competitors have.

This machine has additional wearing and final recut plates to ensure a finer cut and to get more material into the trailer. Can harvest wet or dry material and cut grass into a windrow. Can pick up straight from the swath - handles anything from grass to maize stalks.
